Introduction

Metal scaffolds are widely used equipment or temporary structures erected to provide safe passages and working platform for workers working at height. It is frequently used as a safe means of access to carry out works which cannot be done from ground or part of the building or other permanent structures.

Under the WSH [Scaffolds] Regulations 2011, workers who are involved in the erection, dismantling, re-positioning or alteration of metal scaffold shall attend a training to be qualified as a scaffold erectors. Such training course should be approved by the Commissioner of WSH Act.

Objective

This course is approved by the Commissioner of WSH Act and the objective of the training is:

- To provide training in the fundamental skills required in the proper and safe procedures for erecting and dismantling of metal scaffolds widely used in the construction industry.

Course Contents:

70% of this course consists of practical training on safe and proper ways to erect and dismantle the various types of metal scaffolds while the other 30% consists of classroom lectures on:

- Introduction :
 - Classification, definition, terminology and materials for metal scaffold
- Methods of securing metal scaffolds:
 - Ties and braces
- Static and Mobile scaffolds requirement
- Safety in erection and dismantling metal scaffolds
- Rules and Regulations
- Case Studies

Assessment

Assessment at the end of the training will consist of:

- 1.0 hour of written assessment
- 7.0 hours of practical assessment
